

Notes and Specifications

1. Tegral Classic Natural slates
2. Slating battens
3. Underlay
4. Rafter/truss with a minimum 40mm clearance to wall
5. Mineral fibre quilt fire stopping material laid between battens
6. Mineral fibre quilt fire stopping material laid between rafters and wall and between underlay and top of the wall
7. Masonry party wall

The gap between the wall and the underside of the underlay should be as small as practicable, generally not greater than 50mm.

For additional guidelines, reference should be made to Building Regulations 1997, Technical Guidance Document B, Fire Safety
